

# The floor

# is DNS

# 17 eclectic DNS hackers worked on

- DNS privacy
- DNS support for specific network environments
- DNS provisioning
- Miscellaneous

# DNS privacy

Pallavi Aras &  
Han Zhang

- Zone transfer over TLS
- dnsjava library XoT client
  - draft-hzpa-dprive-xfr-over-tls

Petr Špaček

- DoH proxy on fastcgi

Witold Krecicki

- Preparing BIND9 for DoT & DoH

# DNS in specific network env.

Stephane  
Bortzmeyer

## Identifier/Locator Network Protocol (ILNP)

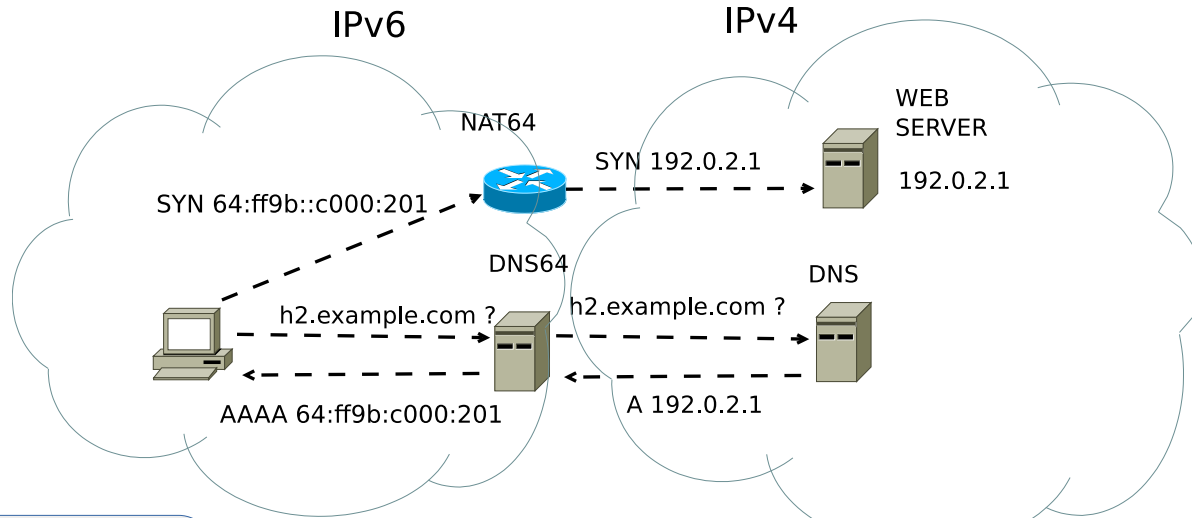

- Working in knot resolver
- Wip in Unbound

```
% dig +tries=1 @::1 -p 9053 AAAA ilnp-aa-test-c.bhatti.me.uk.
;; ->HEADER<<- opcode: QUERY, status: NOERROR, id: 60198

Ralph Dolmans

## Service location and parameter specification via the DNS

- draft-nygren-httpbis-httpssvc

From aname draft:

Redirecting website lookups to an alternate domain name via SRV or URI resource records would be an effective solution from the DNS point of view, but to date, browser vendors have not accepted this approach.

# Miscellaneous

Evan Hunt

## YAML output from `dig` & `delv`

- Started out with JSON (RFC8427) for `dig` and `delv`
- Paul Hoffman (author of RFC8427) said that YAML is fine!
- Already in use in Paul's RSSAC proof of concept root server measurement framework for latency & availability!
- [https://gitlab.isc.org/isc-projects/bind9/merge\\_requests/2168](https://gitlab.isc.org/isc-projects/bind9/merge_requests/2168)
